

**Konstantin Anokhin** is the Director of the Institute for Advanced Brain Studies at the Lomonosov Moscow State University. Anokhin Research Institute of Normal Physiology in Moscow. He has made substantial contribution to understanding of molecular and cellular mechanisms of memory, identification of genes involved in memory consolidation, characterization of memory reconsolidation mechanisms and development of new techniques for cellular imaging of cognitive neuronal networks. His latest work is on a theory of higher brain functions – the neural hypernetwork theory. He is a member of the Russian Academy of Sciences.
